Communications & Networking Technology

With the emergence of 5G and other innovations, Barclay Damon is ready to assist clients as communications and networking technology prepare to advance again. Our clients include global innovators in electronics, software and hardware development, and the wireless, fiber optic, copper, and other digital and cellular technologies that support these products.

With the next wave of business opportunities and legal challenges, including the integration of artificial intelligence and growth in “the internet of things,” we provide legal strategies and solutions that protect research, product development, distribution, networks, products liability, and more.

Representative Experience

- Obtained dismissal with prejudice of federal Defend Trade Secrets Act (DTSA) claims against our client, in a $200 million action pending in US District Court for the Southern District of New York. Plaintiff claimed defendants, including our clients, misappropriated trade secrets and violated alleged fiduciary duties in connection with the establishment of a stock index identifying opportunities to invest in publicly traded shares based upon the brand value of the issuing companies. The court held that the pleading did not state a federal claim under the DTSA, denied the plaintiff leave to re-plead, and dismissed all related state law claims.
- Secured the dismissal of a patent infringement case commenced against a global manufacturer of telecommunication products without having to make a monetary payment.
